

VDI offers a wide array of component materials that can be used in window film products. From standard metallized aluminum to spectrally selective coatings with different visual appearances and heat rejection properties, VDI can support any window film need. VDI is capable of coating on substrates as thin as 0.5 mil and up to 10 mil.

## Sputtered & Evaporative Deposition

- Web widths of up to 80 inches
- Substrates include PET, weatherable PET, and UV stable PET.
- Sputtered coatings include metals, alloys, dielectrics, and transparent conducting oxides.

## Quality and Location

All VDI component products are manufactured at a single production facility ensuring quality and efficiency to customers worldwide.

VDI is a key industry solutions provider to many industry leading companies – serving as one of the nation’s foremost custom roll-to-roll metallizers of evaporative and sputtered coatings.

## Made in the USA

All VDI window film component products are manufactured in the USA to the highest quality standards.
